

Green Straws™

100% Natural

Made from water grass

Durable

Don't go soggy
Lasts 12 hours

Taste free

Just taste
your drink

Sustainable

100% Compostable
& Biodegradable

Generous width

5mm - 8mm

What are Green straws?

Green Straws are a 100% natural drinking straw. They are made from Lepironia Articulata - an edible, non-toxic and naturally occurring water grass from the Mekong Delta.

Best alternative to plastic

Green Straws are 100% biodegradable & compostable, unlike plastic that takes hundreds of years to decompose.

Green Straws are better than paper because they do not go soggy and change the taste of drinks. Paper straws are not recyclable or compostable and take years to break down.

Green Straws are softer than bamboo. They have a lower carbon footprint than paper and metal straws. And they have a generous width unlike hay and wheat.

Green Straws provide a fantastic customer drinking experience.

Product specifications

- Length 12cm or 20cm
- Width 5 - 8mm
- ISO 22000:2005 Certification
- Shelf life 12 months
- No pesticides, fertilisers or fossil fuels
- No dyes or bleaches in manufacturing

Our trusted clients:

LESS PLASTIC MORE LIFE

Production process

Collecting & harvesting

The water grass is hand-picked to ensure the highest quality product.

Sizing & cutting

The grass is machine-cut into specific lengths. It is hollowed and the internal surface of the straw is washed.

Raw material processing

The grass is soaked and the outer layer is skinned by hand. It is then deep washed and soaked in food grade lye water to remove any acid sulphate.

Sterilisation

The straws are soaked in food sanitiser (Mother-K fruit & vegetable wash) to ensure the elimination of bacteria and pests. They are rinsed prior to UV sterilization.

UV sterilisation & air drying

The straws are sterilised in UV food steriliser machines to ensure elimination of any micro-organisms and bacteria. The straws are then placed in an air-drying machine.

Final quality control & packaging

Straws are batch-checked. Units that do not meet our quality requirements are discarded prior to being packaged.

Our manufacturing process is followed strictly ensuring the highest quality product for export.

Green straws look and feel great in drinks and don't go soggy!
